

FOX

(*Vulpes vulpes*)

LENGTH: 75 - 140 cm (Adult, Without tail)

HEIGHT: 63 - 120 cm (Adult, At shoulder)

WEIGHT: 3 - 11 kg

WHERE TO SEE THEM:
roaming free in the forest

They have short legs.
Their tail is long (from 35 to 45 cm) and usually very bushy, with a white tip.
The amount of food consumed daily by Red Foxes varies from 0.5 to 1 kg.
They are well-known in nature for their cunning

Females do not hesitate to move their young to safer locations if factors of disturbance arise near their den. The cubs leave the den for the first time around the fourth or fifth week and are very playful

They do not hibernate in winter because they can withstand even the coldest temperatures thanks to the fur covering their bodies, which thickens and serves as insulation in the cold

THEY ARE PART OF THE CANID FAMILY

Carnivorous mammals with non-retractable clawed feet, usually elongated snouts, thin tails, and very acute hearing and sense of smell
