

LONG-TAILED TIT

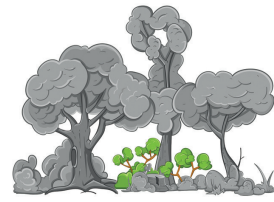

(Aegithalos caudatus)

SIZE:
length 13-16 cm
(of which 6-10 cm are just
the tail)

Practically a ball of
feathers with a long
tail!

WHERE TO SEE THEM:
shrubs

Its nest is pocket-shaped,
built on bushes and is
internally lined with down
feathers

Its diet is predominantly
insectivorous

Often upside down, searching for food
on the smaller branches

Prefers woods with
dense shrubby
undergrowth
